

MECCONTI

MICROORGANISMS

LYOPHILIZED WORKING CULTURES OF REFERENCE STRAINS

MICROSWAB

MICROSWABPLUS

MICROPELLETRT

MICROPELLETRTPLUS

MICROPELLETRT10

**PRODUCT LIST
2023**

MECCONTI offers five different product lines of lyophilized micro-organisms.

MICROSWABS

A *MicroSwab* consists of a lyophilized pellet of a single micro-organism strain inside a pen-like device. This pen-like device contains a sterile swab and rehydration fluid to facilitate the transfer of the micro-organisms directly to culture media. The pellet has no defined CFU assay but a minimum of 1000 CFU/pellet to ensure proper growth. Use *MicroSwabs* whenever a defined assay value is not needed. The *MicroSwabs* are up to **3 passages from reference strain**.

MICROSWABPLUS

The *MicroSwabPlus* also consists of a lyophilized pellet of a single micro-organism strain inside a pen-like device. This pen-like device contains a sterile swab and rehydration fluid to facilitate the transfer of the micro-organisms directly to culture media. The pellet has no defined CFU assay but a minimum of 1000 CFU/pellet to ensure proper growth. Whereas *MicroSwabs* are up to 4 passages removed from reference strain the *MicroSwabPlus* are only **2 passages from reference strain**.

MICROPELLETRT

A *MicroPelletRT* consists of a lyophilized pellet of a single micro-organism strain with a defined mean assay value inside a plastic vial and one separate vial with 1 ml rehydration fluid. Adding the reconstitution fluid to the pellet vial it forms a suspension with a defined assay value of 10-100 CFU/0.1 ml as mandated by USP and Ph.Eur. for growth promotion tests.

MICROPELLETRT10

MicroPelletRT10 is a bigger format of *MicroPelletRT* and is intended for customers who perform a lot of testing.

A *MicroPelletRT10* consists of a lyophilized pellet of a single micro-organism strain with a defined mean assay value inside a plastic vial and one separate vial with 10 ml rehydration fluid. Adding pellet to the reconstitution fluid vial it forms a suspension with a defined assay value of 10-100 CFU/0.1 ml as mandated by USP and Ph. Eur. for growth promotion tests.

MICROPELLETSRTPLUS

MicroPelletsRTPlus microorganisms can be used to perform various essential quality control functions including microbial detection and enumeration, equipment calibration, method validation, bioburden determination, antibacterial effectiveness and lethality testing. *MicroPelletRTPlus* is available in concentrations ranging from 10^2 to 10^8 CFU per pellet. Rehydration fluid for this product line is available in sets of 2 vials of 1 ml each as a separate product.

**All products included in the list of microorganisms products (pages 4-26)
are available to order in two packaging configurations:**

MicroSwabs & MicroSwabsPlus - as set of 2 or 10 swabs per pack

MicroPelletsRT, MicroPelletsRTPlus & MicroPelletsRT10 - as set of 2 or 10 pellets per pack
